

Manage Admin Profile Function(Admin)

➤ *Requirement*

As an admin, I want to be able to edit profile by change username, email address, name, address, about me.

➤ *Dev Task*

- Admin can edit his information by changing username, name, address, phone number, email, about me.
- All of the fields are required to be filled.
- Once click on “Update Profile” button, the system will transfer the inputted information and execute queries in the database to change the according information in table Admin.
- If success, the system will prompt user “Edit profile successfully”.

➤ *Acceptance Criteria*

- Given: Admin logged into the admin page
- And: He accesses Management profile on sidebar
- When: He fills all information he wants to update
- And: He clicks on “Update Profile” button
- Then: He sees the notification stating that updated successfully

➤ *Definition of Done*

- Passes all regression tests.
- Passes SQL injection test.
- Could type username, name, address, phone number, email, about me and updated on database
- If profile is updated successfully, all of admin’s information and account is changed.

➤ *Prototype and Demo*
