Filter product(Admin)

- *Requirement:*
- As an admin I want the website have the filter function so that I can filter product by its price for easily finding product. In admin page, there is a dropdown that contain price, category of filter (price increase, price decrease, time increase, time decrease, category increase, category decrease). When click on each price or category. Page will display all products by that price or category.
- *Dev Task:*
  The solution is to create a function that will follow this event flow
    - Admin can access filter function via dropdown of navigation bar on admin page
    - The price will display when user move mouse to "clothing" in navigation bar
    - When admin clicks on price or category, system will query the database and find products that match price or category
    - System display all products contain that price or category
- *Acceptance Criteria*
    - Given: Admin logged into the admin page
    - And: He accesses the management product table
    - When: He clicks on filter box
    - And: He choose type of filter: filter following price or category what he wants
    - Then: The system will display all filtered products
- *Definition of Done*
    - Passes testing per acceptance criteria items.
    - Can display all products that the admin filters
- *Prototype*
