Manage User Profile Function(User)

➢ *Requirement*

As a user, I want to be able to edit profile by change information: username, name, address, phone number, email, and age, about me.

➢ *Dev Task*

- Any account can edit its information by changing username, name, address, phone number, email, and age, about me.
- All of the fields are required to be filled.
- Once click on "Update Profile" button, the system will transfer the inputted information and execute queries in the database to change the according information in table Users.
- If success, the system will prompt user "Edit profile successfully".

➢ Acceptance Criteria

- Given: User logged into the system
- And: He accesses to the edit information on dropdown of user's icon
- When: He fills all information that he wants to edit
- And: He clicks on "Update Profile" button
- Then: He sees notification stating that update information successfully.

➢ Definition of Done

- Passes all regression tests.
- Passes SQL injection test.
- Could type username, name, address, phone number, email, and age, about me and updated on database
- If profile is updated successfully, all of user's information and account is changed.

➢ *Prototype and Demo*
