Filter product(User)

➢ *Requirement:*
As a user I want the website have the filter function so that I can filter product by its price for easily finding product. In home page, there is a dropdown that contain price of filter (price increase, price decrease). When click on each price. Page will display all product by that price.

➢ *Dev Task:*
The solution is to create a function that will follow this event flow
- User can access filter function via dropdown of navigation bar on homepage
- The price will display when user move mouse to "clothing" in navigation bar
- When user clicks on price, system will query the database and find products that match price
- System display all products contain that price

➢ *Acceptance Criteria*
- Given: User is on product page
- When: He clicks on filter box
- And: He chooses type of filter: filter following price what he wants
- Then: The system will display all filtered products

➢ *Definition of Done*
- Passes testing per acceptance criteria items.
- Can display all products that the user filters

➢ *Prototype*
